

E.G.S. PILLAY ENGINEERING COLLEGE

(Autonomous)

Approved by AICTE, New Delhi | Affiliated to Anna University, Chennai
Accredited by NAAC with 'A' Grade | Accredited by NBA (CSE, EEE, MECH)
NAGAPATTINAM – 611 002

M.E. POWER ELECTRONICS AND DRIVES

Full Time Curriculum and Syllabus

First Year – First Semester

Course Code	Course Name	L	T	P	C	Maximum Marks		
						CA	ES	Total
Theory Course								
1701PE101	Applied Mathematics for Electrical Engineers	2	2	0	3	40	60	100
1702PE102	Power Semiconductor Devices and Recent Advancements	3	0	0	3	40	60	100
1702PE103	Analysis of Power Converters	3	2	0	4	40	60	100
1702PE104	Analysis of Inverters	3	2	0	4	40	60	100
1702PE105	Modelling and Analysis of Electrical Machines	3	2	0	4	40	60	100
	Elective-I	3	0	0	3	40	60	100
Laboratory Course								
1704PE106	Power Electronic Circuits Laboratory	0	0	2	1	50	50	100
1704PE107	Power Electronics Simulation Laboratory	0	0	2	1	50	50	100
1704PE108	Communication Skills Lab I	0	0	2	1	100	0	100

L – Lecture | T – Tutorial | P – Practical | C – Credit | CA – Continuous Assessment | ES – End Semester

1702PE102	POWER SEMICONDUCTOR DEVICES AND RECENT ADVANCEMENTS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To understand the basic concepts of power semiconductor devices.
2. To analyze the characteristics of various devices
3. To design a power electronic circuit for an application.

UNIT I INTRODUCTION 9 Hours

Status of development of power semiconductor Devices – Types of static switches – Controlled and uncontrolled – Ideal and real switches – Static and dynamic performance – Use of heat sinks – Switching losses.

UNIT II POWER DIODES 9 Hours

Types – Electrical rating – Switching and steady state characteristics – Snubber circuits – Series and parallel operation – Schottky diodes – Fast recovery diodes.

UNIT III THYRISTORS 9 Hours

Physics of device operation – Electrical rating - Switching and steady state characteristics – Gate circuit requirements – Protection – Series and parallel operation – Driver circuit – Types of thyristors: Asymmetrical thyristor – Reverse conducting Thyristor – Light fired thyristor – Switching losses - TRIACs, GTOs and MCTs - Electrical rating - Switching and steady state characteristics – Protection – Gate circuit requirements.

UNIT IV POWER TRANSISTORS 9 Hours

Types – Ratings – Static and switching characteristics – Driver circuit – Snubber circuits – Power Darlington - Power MOSFETs -Types – Comparison with BJTs – Structure – Principle of operation – Switching losses – Driver circuit – Snubber circuits.

UNIT V IGBTs AND MODERN POWER DEVICES 9 Hours

Comparison with power BJT and MOSFET – Structure – Principle of working – Switching characteristics – Gate drive requirements – HV IGBT structure – Principle of working – Comparison with GTO -SITs – Characteristics – Power integrated circuit – Characteristics – Field controlled thyristors – New semiconductor materials for devices – Intelligent power modules. Integrated gate commutated thyristor (IGCT) - Comparison of all power devices.

TOTAL: 45 HOURS

FURTHER READING:

Application of Power Devices in Power System Protection Circuits.

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1: Explain the recent developments in Power Semiconductor Devices.
- CO2: Describe the construction and working features of Power Devices like power diodes, thyristors, power transistors and IGBTs.
- CO3: Explain the characteristics of power semiconductor devices.
- CO4: Explain the switching losses present in the devices.
- CO5: Explain and apply protection circuit for each device.

1702PE103	ANALYSIS OF POWER CONVERTERS	L	T	P	C
		3	0	0	3

Course Objectives:

1. To understand the classifications of power converters.
2. To analyze the power converters to determine its various performance parameters.
3. To apply PWM techniques for different power converters.

UNIT I SINGLE PHASE AC-DC CONVERTER 9 Hours

Static Characteristics of power diode, SCR and GTO, half controlled and fully controlled converters with R-L, R-L-E loads and freewheeling diodes – continuous and discontinuous modes of operation - inverter operation –Sequence control of converters – performance parameters: harmonics, ripple, distortion, power factor – effect of source impedance and Overlap-reactive power and power balance in converter circuits

UNIT II THREE PHASE AC-DC CONVERTER 9 Hours

Semi and fully controlled converter with R, R-L, R-L-E - loads and freewheeling diodes – inverter operation and its limit – performance parameters – effect of source impedance and over lap – 12 pulse converter.

UNIT III SINGLE PHASE INVERTERS 9 Hours

Introduction to self-commutated switches : MOSFET and IGBT - Principle of operation of half and full bridge inverters – Performance parameters – Voltage control of single phase inverters using various PWM techniques – various harmonic elimination techniques – forced commutated Thyristor inverters – Design of UPS

UNIT IV THREE PHASE INVERTERS 9 Hours

180 degree and 120 degree conduction mode inverters with star and delta connected loads – voltage control of three phase inverters: single, multi pulse, sinusoidal, space vector modulation techniques – Application to drive system – Current source inverters.

UNIT V MODERN INVERTERS 9 Hours

Multilevel concept – diode clamped – flying capacitor – cascade type multilevel inverters - Comparison of multilevel inverters - application of multilevel inverters – PWM techniques for MLI – Single phase & Three phase Impedance source inverters - Filters.

TOTAL: 45 HOURS

FURTHER READING:

Application of Random PWM techniques for Power Converters

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1: List the classifications of power converters
- CO2: Explain the different modes of operation of power converters like AC- DC & DC – AC converters (Single Phase & Three phase).
- CO3: Explain the control of power converters with various PWM techniques like Single, Multi, Sine and SVPWM.
- CO4: Analyze the performance parameters of power converters.
- CO5: Explain the application of power converters.

1702PE104	ANALYSIS OF INVERTERS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To understand the classifications of Inverters.
2. To analyze the Inverters to determine its various performance parameters.
3. To analyze ZVS and ZCS in a inverter.

UNIT I BASIC INVERTERS 9 Hours

Basic series inverter – Modified series inverter- High frequency series inverter- Design of L and C – Parallel inverter- Design of parallel inverter.- Line commutated inverter – Concepts of PWM techniques.

UNIT II VOLTAGE SOURCE INVERTERS 9 Hours

Principle of operation of half and full bridge inverters – Three phase inverters with 180 degree and 120 degree conduction mode with star and delta connected loads- Performance parameters – Voltage control of single phase and three phase inverters using various PWM techniques – Various harmonic elimination techniques.

UNIT III CURRENT SOURCE AND IMPEDANCE SOURCE INVERTERS 9 Hours

Load commutated current source inverter- Single phase and three phase auto sequential current source inverter (ASCI) – Principle of operation of impedance source inverter- Shoot thro zero state – Comparison of current source inverter, Voltage source inverters and impedance source inverter

UNIT IV MULTILEVEL INVERTERS 9 Hours

Multilevel concept – Diode clamped – Flying capacitor – Cascade type multilevel inverters – Hybrid multi level inverter- FFT analysis- Comparison of multilevel inverters - Applications of multilevel inverters.

UNIT V RESONANT INVERTERS 9 Hours

Concept of Zero Voltage Switching and Zero Current Switching - Series and parallel resonant inverters - Voltage control of resonant inverters – Class E resonant inverter – Resonant DC Link inverters.

TOTAL: 45 HOURS

FURTHER READING:

Applications of Inverters in Renewable Energy system

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1: Explain the performance of series and parallel inverter with PWM techniques
- CO2: Explain the working of voltage source inverters and also its control with PWM techniques.
- CO3: Explain the working of current source inverter and impedance source inverter.
- CO4: Explain the classifications, working and applications of multilevel inverter.
- CO5: Explain the concept of ZVS, ZCS and resonant inverters.

1702PE105	MODELING AND ANALYSIS OF ELECTRICAL MACHINES	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To understand the classifications of power converters.
2. To analyze the power converters to determine its various performance parameters.
3. To apply PWM techniques for different power converters.

UNIT I CONCEPTS OF ROTATING MACHINES 9 Hours

Calculation of air gap mmf of a single turn full pitch distributed armature windings - Per phase full pitched and short pitched armature coils (AC machines) - Calculation of air gap mmf of a DC machine - Introduction to direct axis and quadrature axis theory in salient pole machines - Calculation of air gap inductances of a synchronous machine.

UNIT II INDUCTION MACHINE MODELING 9 Hours

Static and rotating References: frames, transformation relationships - Stationary circuit variables transformed to the arbitrary Reference frame treating R, L, C elements separately - Application of Reference frame theory to three phase symmetrical induction machine - Direct and quadrature axis model in arbitrarily rotating Reference frame - Voltage and torque equations.

UNIT III SYNCHRONOUS MACHINE MODELING 9 Hours

Application of reference frame theory to three phase synchronous machine-dynamic model analysis-Park's equation - Voltage and torque equations - Deviation of steady state phasor relationship from dynamic model - Generalized theory of rotating electrical machine and Kron's primitive machine.

UNIT IV SYNCHRONOUS MACHINE MODELING 9 Hours

Synchronous machine dynamic equivalent circuit parameters - Standard and derived machine time constants - Frequency response test, Analysis and dynamic modeling of two phase asymmetrical induction machine and single phase induction machine.

UNIT V SPECIAL MACHINES 9 Hours

Permanent magnet synchronous machine, Surface permanent magnet (square and sinusoidal back emf type) and interior permanent magnet machines - Construction and operating principle - Dynamic modeling and self controlled operation – Dynamic analysis of Switched Reluctance Motors.

TOTAL: 45 HOURS

FURTHER READING:

Dynamic Modeling of Linear motors

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1: Brief the fundamental concepts of rotating machines.
- CO2: Determine the air gap mmf of DC and AC machines.
- CO3: Explain the application of reference theory Induction Machine, Synchronous Machine and Special Machines.
- CO4: Analyze the dynamic modeling of Induction Machine, Synchronous Machine and Special Machines.
- CO5: Analyze the electrical machine equivalent parameters.

1704PE106	POWER ELECTRONICS CIRCUITS LABORATORY	L	T	P	C
		0	0	4	2

COURSE OBJECTIVES:

1. To obtain the switching characteristic of different types of power semi-conductor devices.
2. To determine the operation, characteristics and performance parameters of controlled rectifiers.
3. To apply switching techniques and basic topologies of DC-DC switching regulators.

LIST OF EXPERIMENTS:

1. Single phase half controlled converter with RL.
2. Single phase full controlled converter with RL.
3. Single phase series inverter.
4. Single phase parallel inverter.
5. Single phase cycloconverter.
6. Three phase fully controlled converter with RL and RLE loads.
7. MOSFET based step up and step down chopper.
8. Single phase PWM inverter.
9. AC voltage controller.
10. Resonant converter.

TOTAL: 45 HOURS

ADDITIONAL EXPERIMENTS:

Fabricate the Boost converter for Photovoltaic applications

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1: Draw the characteristics of Power electronics devices.
- CO2: Determine the various parameters of single phase and three phase rectifier.
- CO3: Demonstrate the response of chopper for a dc load
- CO4: Diagnose the various causes of harmonics
- CO5: Design a PWM converter and an ac voltage regulator

1704PE107	POWER ELECTRONICS SIMULATION LABORATORY	L	T	P	C
		0	0	4	2

COURSE OBJECTIVES:

1. To determine the performance curves for various power electronic circuits.
2. To determine the performance parameters of various power electronic circuits
3. To determine the solutions for differential equations.

LIST OF EXPERIMENTS:

1. Simulation of single phase half wave controlled converter fed RLE load2.
2. Simulation of single phase fully controlled converter fed RLE load.
3. Simulation of three phase half controlled converter fed RL load.
4. Simulation of three phase fully controlled converter fed RL load.
5. Simulation of dynamics of armature plunger / relay contactor arrangement.
6. Simulation of dynamics of doubly excited system.
7. Simulation of single phase VSI fed RL/RC load.
8. Simulation of i) LC tank circuit resonance, ii) Basic / modified series inverter, iii) Series loaded series resonant inverter
9. Simulation of single phase current source inverter fed induction heating load.
10. Simulation of multi level inverter topologies.
11. Numerical solution of ordinary differential equations.
12. Numerical solution of partial differential equations

TOTAL: 45 HOURS

ADDITIONAL EXPERIMENTS:

Simulation of a Power Converter with SVPWM technique.

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1: Simulate the different power converters with RL Load to determine the performance curves.
- CO2: Simulate the different power converters with RLE Load to determine the performance curves.
- CO3: Simulate the different power converters with RL Load to determine the performance parameters.
- CO4: Simulate the different power converters with RLE Load to determine the performance parameters.
- CO5: Simulate the differential equations to find out the numerical solution.

1704PE108	COMMUNICATION SKILLS LAB I (Common to all M.E Programmes)	L	T	P	C
		0	0	2	1

COURSE OBJECTIVES:

1. To acquire skills for using English in workplace effectively.
2. To communicate for essential business needs.
3. To prepare students for taking BEC Vantage level examination which is an International Benchmark for English language proficiency of Cambridge English Language Assessment

LIST OF EXPERIMENTS:

1. GRAMMAR AND VOCABULARY

Forming asking complex questions – expressing purpose and function – modal verbs – impersonal passive voice– Reported speech – cause and effect – relative pronouns – expressions followed by – *ing* forms– acronyms – marketing terms / vocabulary – financial terms – collocations – discourse markers

2. LISTENING

Purposes of listening – features of listening texts – potential barriers to listening – specific listening skills – strategies to use when listening– distinguishing relevant from irrelevant information – gap filling exercise – multiple-choice options – note completion – matching and multiple choice questions – listening for specific information, gist, topic, context and function.

3. SPEAKING

Word and sentence stress – clear individual sounds – turn taking – initiating and responding - intonation patterns – pronunciation – mother tongue intrusion– conversation practice – turn-taking and sustaining the interaction by initiating and responding appropriately- Public Speech – Lectures.

4. READING

Purposes of reading – potential barriers to reading – paraphrasing – identifying facts and ideas – skimming and scanning for information – matching statements with texts– spotting reference words – understanding text structure – understanding the ideas in a text – distinguishing between the correct answer and the distracter – understanding cohesion in a text – deciphering contextual meaning of words and phrases – cloze – proof reading - transcoding.

5. WRITING

Paragraphing a text – using appropriate connectives – editing practice –Longer Documents: writing a proposal & Reports, Agenda – Minutes – Circular

TOTAL: 30 HOURS

ADDITIONAL EXPERIMENTS:

1. Body Language: Kinesics, Proxemics, Para linguistic, Nuances of Speech Delivery
2. Personality Development: Building self esteem
3. Team work

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

CO1: To enable students to get International recognition for work and study.

CO2: To use English confidently in the International business environments.

CO3: To be able to take part in business discussion, read company literature, write formal and informal business correspondences and listen and understand business conversations
