| | | | | | |
|------------------|---|----------|----------|----------|----------|
| 1701MA402 | PROBABILITY AND RANDOM PROCESSES | L | T | P | C |
| | | 3 | 2 | 0 | 4 |

PREREQUISITE:

1701MA101 and 1701MA102-Differentiation and integration.
1701MA301-Knowledge about Fourier transformation.

COURSE OBJECTIVES:

- 1.To analyze the concepts of probability, random variables and distribution functions.
- 2.To acquire skill in handling situation with more than one random variable with time function.
- 3.To analyze the concept of signals and system.

UNIT I PROBABILITY

12 Hours

Probability- Theorems on Probability- Conditional Probability – Baye’s Theorem- Discrete and continuous random variables – Moments – Moment generating functions –Real Time Problems

UNIT II ONE DIMENSIONAL RANDOM VARIABLE

12 Hours

Discrete Distributions: Binomial, Poisson, Geometric - Continuous Distributions: Uniform, Exponential, Normal distributions- Application of Distribution in Engineering Problems

UNIT III TWO - DIMENSIONAL RANDOM VARIABLES

12 Hours

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Linear regression

UNIT IV MARKOV PROCESSES AND MARKOV CHAINS

12 Hours

Classification – Stationary process – Markov process – Markov chains – transition probabilities – Limiting distributions – Poisson process.

UNIT V SPECTRAL DENSITIES AND LINEAR SYSTEMS WITH RANDOM INPUTS

12 Hours

Auto correlation-cross correlation-power spectral density-cross spectral density-Properties-Wiener-Khintchine relation-relationship between cross power spectrum and correlation function. Linear time invariant system-system transfer function-Linear system with random inputs-White noise.

TOTAL: 45 + 15 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :

1. Probabilistic manner which evolve with time.
2. Discrete time Markov chains in modeling Electronic systems.

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Determine the parameters of unpredictable experiments using probability concepts.(K2).
- CO2: Construct probabilistic models for observed phenomena through discrete and continuous distribution (K3).
- CO3: Associate the random variables, by designing joint distribution and correlate the random variables. (K3).
- CO4: Make use of discrete time Markov chain in probabilistic manner, to model computer.(K2).
- CO5: Utilize the applications of random processes in signal processing and communication theory (K2).
- CO6: Demonstrate the specific application to input and output spectral density functions. (K3).

1702EC401

SIGNALS AND SYSTEMS

| L | T | P | C |
|---|---|---|---|
| 3 | 2 | 0 | 4 |

PREREQUISITE :

Transforms and Partial Differential Equations.

COURSE OBJECTIVES:

1. To understand the basic properties of Signals and Systems and the various methods of Classification.
2. To learn Laplace Transform & Fourier transform and their properties.
3. To know Z transform & DTFT and their properties.
4. To characterize LTI systems in the Time domain and various Transform domains.

UNIT I CLASSIFICATION OF SIGNALS AND SYSTEMS 12 Hours
Classification of Signals- Continuous time signals - Discrete time signals - Periodic and Aperiodic signals - Even and odd signals - Energy and power signals -Deterministic and random signals -Complex exponential and Sinusoidal signals. Classification of Systems: Continuous time systems- Discrete time systems - Linear system - Time Invariant system – causal system - BIBO system - Systems with and without memory - LTI system Classification of Systems

UNIT II ANALYSIS OF CONTINUOUS TIME SIGNALS 12 Hours
Fourier series analysis-spectrum of Continuous Time (CT) signals- Fourier and Laplace Transforms in CT Signal Analysis - Properties.

UNIT III LTI CT SYSTEM 12 Hours
Impulse response - Frequency response – Convolution Integral - Analysis and characterization of LTI system using Laplace transform Solution of Differential equation with initial conditions – zero state response and zero input response.

UNIT IV ANALYSIS OF DISCRETE TIME SIGNALS 12 Hours
Baseband Sampling - DTFT – Properties of DTFT - Z Transform – Properties of Z Transform –Inverse Z transform.

UNIT V LTI DISCRETE TIME SYSTEMS 12 Hours
Impulse response - Convolution sum- Analysis and characterization of DT system using Z transform Difference Equations-Block diagram.

TOTAL: 60 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :

Programs using mathematical computing tool for CT and DT system analysis using LT and ZT.

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Discriminate the properties of signals & systems.
- CO2: Utilize Laplace transform, Fourier transform in signal analysis.
- CO3: Comply discrete time signals using Z transform and DTFT
- CO4: Implement continuous time LTI systems using Fourier and Laplace Transforms.
- CO5: Implement discrete time LTI systems using Z transform.
- CO6: Examine practical LTI systems using Laplace and Z transforms

1702EC402

ANALOG INTEGRATED CIRCUITS

| | | | |
|----------|----------|----------|----------|
| L | T | P | C |
| 3 | 0 | 0 | 3 |

PREREQUISITE :

Electron Devices, Circuit Theory and Electronic Circuits.

COURSE OBJECTIVES:

1. To Learn the fundamental concepts behind transistor biasing and to differentiate small signal and large signal circuit models
2. To Learn the concepts of Analog to digital and Digital to Analog converters for microelectronics
3. To Study the performance metrics of Multistage and Power amplifiers
4. To Understand the working of signal generating and wave shaping circuits

UNIT I BASICS OF OPERATIONAL AMPLIFIERS

9 Hours

Operational Amplifiers, DC and AC characteristics, Typical op-amp parameters: Finite gain, finite bandwidth, Offset voltages and currents, Common-mode rejection ratio, Power supply rejection ratio, Slew rate, Applications of Op-amp: Precision rectifiers. Summing amplifier, Integrators and differentiators, Log and antilog amplifiers. Instrumentation amplifiers, voltage to current converters

UNIT II ACTIVE FILTERS

9 Hours

Second order filter transfer function (low pass, high pass, band pass and band reject), Butterworth, Chebyshev and Bessel filters. Switched capacitor filter. notch filter, All pass filters, self-tuned filters

UNIT III ANALOG TO DIGITAL AND DIGITAL TO ANALOG CONVERTERS

9 Hours

Opamp as a comparator, Schmitt trigger, Astable and monostable multivibrators, Triangular wave generator, Multivibrators using 555 timer, Data converters: A/D and D/A converters

UNIT IV PHASE LOCKED LOOP

9 Hours

PLL- basic block diagram and operation, Four quadrant multipliers. Phase detector, VCO, Applications of PLL: Frequency synthesizers, AM detection, FM detection and FSK demodulation

UNIT V CMOS DIFFERENTIAL AMPLIFIERS

9 Hours

DC analysis and small signal analysis of differential amplifier with Resistive load, current mirror load and current source load, Input common-mode range and Common-mode feedback circuits. OTAs vs Opamps. Slew rate, CMRR, PSRR. Two stage amplifiers, Compensation in amplifiers (Dominant pole compensation).

TOTAL: 45 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :

1. Collector Emitter Feedback Bias, Bootstrap Darlington Circuit. Comparison of Power Amplifiers, BJT Digital Logic Inverter.
2. Effect of Emitter or a Source Bypass Capacitor on Low frequency response.
3. CMOS Digital Logic Inverter, BiCMOS Cascade Amplifier, Current Mirror Circuits, CMOS Logic Gate Circuits.
4. Power BJTs, Power MOSFETs.

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Infer the DC and AC characteristics of operational amplifiers and its effect on output and their compensation techniques.
- CO2: Elucidate and design the linear and non linear applications of an opamp and special application ICs.
- CO3: Design active filters using basic opamp circuits.
- CO4: Explain and compare the working of multi vibrators using special application IC 555 and general purpose opamp.
- CO5: Classify and comprehend the working principle of data converters.
- CO6: Illustrate the function of application specific ICs such as PLL and its application in communication.
- CO7: Analyze the CMOS Differential amplifiers with small signal analysis and other ac and dc characteristics.

| | | | | | |
|------------------|---|----------|----------|----------|----------|
| 1702EC403 | MICROPROCESSORS AND MICROCONTROLLERS | L | T | P | C |
| | | 3 | 0 | 0 | 3 |

PREREQUISITE:

1. Digital Electronics.
2. Digital Circuits.

COURSE OBJECTIVES:

1. To teach the architecture and functions of 8085 and 8086 Microprocessors.
2. To impart the concepts of 8051 microcontroller.
3. To convey aspects of I/O and Memory Interfacing circuits.
4. To train basic knowledge about advanced processors.

UNIT I INTRODUCTION TO MICROPROCESSORS 9 Hours

Evolution of Microprocessors - 8-Bit Processor - 8085 Architecture – Register Organization - Instruction Set – Timing Diagram- Addressing Modes – Interrupts- Interrupt Service Routines- Assembly Language Programming Using 8085.

UNIT II THE 8086 MICROPROCESSORS 9 Hours

Introduction to 8086 – Microprocessor architecture – Addressing modes - Instruction set and assembler directives – Assembly language programming – Modular Programming - Linking and Relocation - Stacks - Procedures – Macros – Interrupts and interrupt service routines - 8086 signals.

UNIT III MICROCONTROLLER 9 Hours

Architecture of 8051 – Special Function Registers (SFRs) - I/O Pins Ports and Circuits - Instruction set - Addressing modes - Assembly language programming.

UNIT IV I/O INTERFACING 9 Hours

Memory Interfacing and I/O interfacing - Parallel communication interface – Serial communication interface – D/A and A/D Interface - Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications Case studies: Traffic Light control, LED display, LCD display, Keyboard display interface and Alarm Controller.

UNIT V ARCHITECTURE OF ADVANCED PROCESSORS 9 Hours

Multiprocessor configurations – Intel 80286 – Internal Architectural – Register Organization – Internal Block Diagram – Architectural features and Register Organization of i386, i486 and Pentium processors. ARM architecture.

TOTAL: 45 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:

Intel Core i3, i5 and i7

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Construct hardware, software and programming concepts of Microprocessor (K2)
- CO2: Summarize architecture, instructions and addressing modes of 8086 Microprocessor(K2)
- CO3: Describe addressing modes, Architecture, pins of 8051 Microcontroller (K2)
- CO4: Illustrate interfacing of Serial, parallel, Keyboard, Display with Microcontroller (K2)
- CO5: Use the programming concepts to write assembly language programs (K3)
- CO6: Utilize the features, registers of Advanced and Pentium Processors (K3)

1702EC404

TRANSMISSION LINES AND WAVEGUIDES

L T P C
3 0 0 3

PREREQUISITE :

Engineering Electromagnetic.

COURSE OBJECTIVES:

1. To introduce the various types of transmission lines and to discuss the losses associated.
2. To give thorough understanding about impedance transformation and matching.
3. To use the Smith chart in problem solving.
4. To impart knowledge on filter theories and waveguide theories.
5. To introduce the various types of transmission lines and to discuss the losses associated.

UNIT I TRANSMISSION LINE THEORY

9 Hours

General solution of transmission line – The two standard forms for voltage and current of a line terminated by an impedance – Physical significance of the equation and the infinite line – Reflection coefficient – Wavelength and velocity of propagation – Waveform distortion – Distortion less transmission line – The telephone cable – Inductance loading of telephone cables – Input impedance of lossless lines – Reflection on a line not terminated by Z_0 – Transfer impedance – Reflection factor and reflection loss.

UNIT II IMPEDANCE MATCHING IN TRANSMISSION LINES

9 Hours

Standing waves and standing wave ratio on a line – One eighth wave line – Quarter wave line and impedance matching – The half-wave line –Smith chart – Application of the smith chart – Conversion from impedance to reflection co-efficient and vice-versa – Impedance to admittance conversion and vice-versa – Input impedance of a lossless line terminated by an impedance – Single stub matching and double stub matching.

UNIT III FILTERS AND GUIDED WAVES

9 Hours

Constant K Filters - Low pass, High pass band, pass band elimination filters - m-derived sections Waves between parallel planes of perfect conductors – Transverse electric and transverse magnetic waves – Characteristics of TE and TM waves – Transverse electromagnetic waves – Velocities of propagation – Component uniform plane waves between parallel planes – Attenuation of TE and TM waves in parallel plane guides –Wave impedances.

UNIT IV RECTANGULAR WAVEGUIDES

9 Hours

Transverse magnetic waves in rectangular wave guides – Transverse electric waves in rectangular waveguides – Characteristics of TE and TM waves – Cutoff wavelength and phase velocity – Impossibility of TEM waves in waveguides – Dominant mode in rectangular waveguide – Attenuation of TE and TM modes in rectangular waveguide – Wave impedance – Characteristic impedance – Excitation of modes.

UNIT V CIRCULAR WAVE GUIDES AND RESONATORS

9 Hours

Bessel functions – Solution of field equations in cylindrical co-ordinates – TM and TE waves in circular guides – Wave impedances and characteristic impedance – Dominant mode in circular waveguide – Excitation of modes – Microwave cavities – Rectangular cavity resonators – Circular cavity resonator – Semicircular cavity resonator – Q factor of a cavity resonator for TE₁₀₁ mode.

TOTAL: 45 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :

1. Transmission line equations at radio frequencies.
2. Characteristic impedance of symmetrical networks.
3. The circle diagram for the dissipation less line –composite filters.

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Discuss the propagation of signals through transmission lines.
- CO2: Analyze signal propagation at Radio frequencies.
- CO3: Analyze impedance matching using smith chart.
- CO4: Construct the constant k and m-derived filter for various frequency ranges.
- CO5: Illustrate uniform plane wave propagation in different mediums.
- CO6: Analyze the propagation of waves in rectangular wave guides.
- CO7: Analyze the propagation of waves in circular wave guides and resonators.

1702EC405

CONTROL SYSTEMS

| L | T | P | C |
|---|---|---|---|
| 3 | 0 | 0 | 3 |

PREREQUISITE:

Laplace Transform

COURSE OBJECTIVES:

1. In this course it is aimed to introduce to the students the principles and applications of control systems.
2. To the basic concepts of block diagram reduction, time domain analysis solutions to time invariant systems.
3. In deals with the different aspects of stability analysis of systems in frequency domain and time domain.
4. To understand the application of control system.
5. In this course it is aimed to introduce to the students the principles and applications of control systems.

UNIT I INTRODUCTION OF CONTROL SYSTEMS

9 Hours

Basic concept of control systems - Open loop and closed loop control systems and their differences - Block diagram algebra - Representation by signal flow graph - Reduction using Mason's gain formula - Feedback characteristics and effect of feedback

UNIT II TIME RESPONSE ANALYSIS

9 Hours

Time response analysis - Time response of first order system - Transient response of second order system - Time domain specification - steady state response - Steady state error - Effect of proportional derivatives - Proportional integral system

UNIT III FREQUENCY RESPONSE ANALYSIS

9 Hours

Frequency response - Frequency domain specification - stability analysis from bode plot , polar plot , nyquist plot - Compensation techniques - Lag , Lead , lead-lag controllers design in frequency domain .

UNIT IV STABILITY ANALYSIS AND ROOT LOCUS TECHNIQUES

9 Hours

Concept of stability - Routh Hurwitz criterion - Nyquist stability criterion - Routh locus concept - construction of root locus

UNIT V APPLICATIONS OF CONTROL SYSTEMS

9 Hours

Aircraft flight control systems - Director(military) - Embedded instrumentation - Fire control system - Guidance , navigation and control - Laser ignition - Weight shift control

TOTAL: 45 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR :

Modern control systems.

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Illustrate basic concepts of open loop and closed loop control systems.
- CO2: Develop transfer function of a control system using block diagram reduction technique and signal flow graph method.
- CO3: Determine Transient and Steady State behavior of systems using standard test signals and it's time response specifications.
- CO4: Calculate gain margin and phase margin of a system from various plots.
- CO5: Examine the stability of a control system using Routh-Hurwitz Criterion, Root Locus Technique and Nyquist Stability Criterion.
- CO6: Describe the real time applications of control systems.

1702EC451

ANALOG INTEGRATED CIRCUITS LABORATORY

| L | T | P | C |
|---|---|---|---|
| 0 | 0 | 3 | 2 |

PREREQUISITE :

Electronics Circuits Lab.

COURSE OBJECTIVES:

1. To expose the students to linear and integrated circuits.
2. To understand the basics of linear integrated circuits and available ICs.
3. To understand characteristics of operational amplifier.
4. To apply operational amplifiers in linear and nonlinear applications.
5. To acquire the basic knowledge of special function IC.
6. To use PSPICE software for circuit design.

LIST OF EXPERIMENTS:

1. Inverting, Non inverting and differential amplifiers.
2. Integrator and Differentiator.
3. Instrumentation Amplifier.
4. Active low-pass, High-pass and band-pass filters.
5. Astable & Monostable multivibrators and Schmitt Trigger using op-amp
6. Phase shift and Wien bridge oscillators using op-amp.
7. Astable and monostable multivibrators using NE555 Timer
8. PLL characteristics and its use as Frequency Multiplier
9. DC power supply using LM317 and LM723
10. Mini project using Op-Amp and Specialized IC's.

SIMULATION USING SPICE

11. Analog multiplier.
12. CMOS Inverter, NAND and NOR.

TOTAL:45 HOURS

ADDITIONAL EXPERIMENTS/ INNOVATIVE EXPERIMENTS:

1. Buck-Boost Converter.
2. Design a circuit for Lisajious Figure.

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Design oscillators and amplifiers using operational amplifiers.
- CO2: Design filters using Opamp and perform experiment on frequency response.
- CO3: Analyse the working of PLL and use PLL as frequency multiplier.
- CO4: Design DC power supply using ICs.
- CO5: Analyse the performance of oscillators and multivibrators using SPICE.

1702EC452

**MICROPROCESSORS AND MICROCONTROLLERS
LABORATORY**

| L | T | P | C |
|----------|----------|----------|----------|
| 0 | 0 | 3 | 2 |

PREREQUISITE :

Digital Lab.

COURSE OBJECTIVES:

1. Write ALP for arithmetic and logical operations in 8085, 8086 and 8051.
2. Differentiate Serial and Parallel Interface.
3. Interface different I/Os with Microprocessors & Microcontrollers.
4. Be familiar with MASM.

LIST OF EXPERIMENTS:

8085 Programs using kits

1. Basic arithmetic and Logical operations.
2. Sorting and searching the given data.

8086 Programs using kits with MASM

3. Floating point operations.

8051 Experiments using kits

4. Basic arithmetic and Logical operations.
5. Square and Find 2's complement of a number.
6. Code conversion.

Peripherals and Interfacing Experiments

7. Traffic light control.
8. Stepper motor and DC Motor control.
9. Key board and Display.
10. Serial interface and Parallel interface.
11. Printer Interfacing.
12. A/D and D/A interface and Waveform Generation.

TOTAL: 45 HOURS

ADDITIONAL EXPERIMENTS/ INNOVATIVE EXPERIMENTS:

Basic experiments using Arduino processor

COURSE OUTCOMES:

After completion of the course, Student will be able to

CO1: Write ALP Programmes for fixed and Floating Point and Arithmetic.

CO2: Interface different I/Os with processor.

CO3: Generate waveforms using Microprocessors & Execute Programs in 8051.

CO4: Explain the difference between simulator and Emulator.

1704EC453

TECHNICAL SEMINAR II

| | | | |
|----------|----------|----------|----------|
| L | T | P | C |
| 0 | 0 | 2 | 0 |

COURSE OBJECTIVES:

1. To develop self-learning skills of utilizing various technical resources to make a technical presentation.
2. To promote the technical presentation and communication skills.
3. To impart the knowledge on intonation, word and sentence stress for improving communicative competence, identifying and overcoming problem sounds.
4. To promote the ability for Interacting and sharing attitude.
5. To encourage the commitment-attitude to complete tasks.

The students are expected to make two presentations on advanced topics (recent trends) related to II year/ III semester subjects. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also. Students are encouraged to use various teaching aids such as power point presentation and demonstrative models.

TOTAL: 30 HOURS

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

- CO1 Identify and utilize various technical resources available from multiple field.
- CO2 Improve the technical presentation and communication skills.
- CO3 Improve communicative competence.
- CO4 Interact and share their technical knowledge.
- CO5 Understand and adhere to deadlines and commitment to complete the assignments.

EVALUATION SCHEME:

Continuous Assessment (100 Marks)

| Distribution of Marks for Continuous Assessment | Marks |
|--|--------------|
| Presentation I | 40 |
| Report | 10 |
| Presentation II | 40 |
| Report | 10 |
| Total | 100 |

1704GE451

LIFE SKILLS: VERBAL ABILITY

| L | T | P | C |
|---|---|---|---|
| 0 | 0 | 2 | - |

PREREQUISITE:

Technical English – I and II

COURSE OBJECTIVES:

1. To help students comprehend and use vocabulary words in their day to day communication.
2. To apply appropriate reading strategies for interpreting technical and non-technical documents used in job-related settings.
3. To ensure students will be able to use targeted grammatical structures meaningfully and appropriately in oral and written production.
4. To enable the students to arrange the sentences in meaningful unit and to determine whether constructions rely on active or passive voice.
5. To apply the principles of effective business writing to hone communication skills.

UNIT I VOCABULARY USAGE

6 Hours

Introduction - Synonyms and Antonyms based on Technical terms – Single word Substitution – Newspaper, Audio and video listening activity.

UNIT II COMPREHENSION ABILITY

6 Hours

Skimming and Scanning – Social Science passages – Business and Economics passages – latest political and current event based passages – Theme detection – Deriving conclusion from passages.

UNIT III BASIC GRAMMAR AND ERROR DETECTION

6 Hours

Parallelism – Redundancy – Ambiguity – Concord - Common Errors – Spotting Errors – Sentence improvement – Error Detection FAQ in Competitive exams.

UNIT IV REARRANGEMENT AND GENERAL USAGE

6 Hours

Jumble Sentences – Cloze Test - Idioms and Phrases – Active and passive voice – Spelling test.

UNIT V APPLICATION OF VERBAL ABILITY

6 Hours

Business Writing - Business Vocabulary - Delivering Good / Bad News - Media Communication - Email Etiquette – Report Writing - Proposal writing – Essay writing– Indexing –Market surveying.

Total: 30 Hours

ASSESSMENT PATTERN

1. Two assignments (2 x 25 marks = 50 marks)
2. Pragmatic assessment (50 marks)

COURSE OUTCOMES:

After completion of the course, Student will be able to

- CO1: Use new words in their day to day communication.
- CO2: Gather information swiftly while reading passages.
- CO3: Students are proficient during their oral and written communication.
- CO4: Rearrange the sentences and able to identify the voice of the sentence.
- CO5: Students use their knowledge of the best practices to craft effective business documents
