L – Lecture | T – Tutorial | P – Practical | CA – Continuous Assessment | ES – End Semester

1701MGX02	INDUSTRIAL ECONOMICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- 1.To introduce the concepts of micro, macroeconomic systems and business decisions in industry.
- 2.To acquire knowledge on laws of demand & supply and methods of forecasting the demand.
- 3.To emphasis the systematic evaluation of the costs, breakeven point for return on economics and diseconomies.

UNIT I INTRODUCTION 9 Hours
Introduction to Industrial economics- Micro and Macro economics - Kinds of Economic Systems - Production Possibility Frontier - Opportunity Cost - Objective of Organizations - Kinds of Organization.

UNIT II DEMAND AND SUPPLY 9 Hours
Functions of Demand and Supply - Law of diminishing Marginal Utility - Law of Demand and Supply
Elasticity of Demand - Demand Forecasting Methods - Indifference curve.

UNIT III PRODUCTION AND COST 9 Hours
Production Function - Returns to Scale - Law of Variable Proportion - Cost and Revenue concepts and Cost Curves - Revenue curves - Economies and Dis-Economies of scale - Break Even point.

UNIT IV MARKET STRUCTURE 9 Hours
Market Structure - Perfect Competition - Monopoly - Monopolistic - Oligopoly - Components of Pricing - Methods of Pricing - Capital Budgeting IRR - ARR - NPV - Return on Investment - Payback Period.

UNIT V INTRODUCTION TO MACRO ECONOMICS AND FINANCIAL ACCOUNTING 9 Hours
National Income - Calculation Methods - Problems - Inflation - Deflation - Business Cycle - Taxes - Direct and Indirect Taxes - Fiscal and monetary policies.

TOTAL: 45 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:

1. Nature and characteristics of Indian Economy.
2. Role and functions of Central bank - LPG - GATT - WTO.

1702EE601

SOLID STATE DRIVES

L	T	P	C
3	0	0	3

PREREQUISITE:

1. Power Electronics
2. Electrical Machinery – I & II

COURSE OBJECTIVES:

1. To understand the fundamentals of motor load system
2. To explain about power converters fed DC and AC drives
3. To design a controllers for closed loop operation of DC and AC drives

UNIT I DRIVE CHARACTERISTICS

8 Hours

Electric drives-classification, elements of electrical drive, equations governing motor load dynamics, torque components; classes of duty; steady state stability; multi quadrant dynamics - acceleration, deceleration, starting and stopping; typical load torque characteristics- Constant torque, torque proportional to speed, fan load, torque inversely proportional to speed; selection of motor rating.

UNIT II DC MOTOR DRIVE

9 Hours

Converter fed drive- review of one and two quadrant converter and its characteristics, steady state analysis of single phase and three phase converter fed separately excited dc motor drive- continuous and discontinuous conduction, four quadrant operation of converter.

Chopper fed drive – review of dc chopper and its control strategies, motoring mode, braking mode and four quadrant operation of chopper fed drive.

UNIT III INDUCTION MOTOR DRIVE

12 Hours

Review of induction motor equivalent circuit and torque speed characteristics; speed control of induction motor drive -stator voltage control, v/f control, VSI fed induction motor drive, cycloconverter control and vector control –block diagram approach; impact of rotor resistance on induction motor speed torque curve, closed loop control of induction motor drive.

UNIT IV SYNCHRONOUS MOTOR DRIVE

8 Hours

v/f&self-control of synchronous motor drive, margin angle control and power factor control, VSI and CSI fed synchronous motor drive -permanent magnet synchronous motor – construction, types, BLPM DC motor and BLPM AC motor.

UNIT V CLOSED LOOP CONTROL OF DC DRIVE

8 Hours

Control structure of dc drive, armature voltage and field control of separately excited dc motor drive; transfer function of separately excited dc motor and converter, design of controllers – speed controller and current controller.

TOTAL: 45 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:

1. Control of slip ring induction motor drive
2. Space vector modulation technique for induction motor drive

1702EE602

POWER SYSTEM ANALYSIS

L	T	P	C
3	2	0	4

PREREQUISITE:

1. Transmission and Distribution
2. Electric circuit analysis

COURSE OBJECTIVES:

1. To model the power system under steady state operating condition. To apply efficient numerical methods to solve the power flow problem.
2. To model and analyse the power systems under abnormal (or) fault conditions.
3. To model and analyse the transient behavior of power system when it is subjected to a fault.

UNIT I POWER SYSTEM MODEL 12 Hours

Representation of power system components like synchronous machines, induction machines, transformers, transmission lines, loads etc, for steady state analysis - per unit quantities, impedance and reactance diagram - formulation of network matrices for the power systems - bus impedance and bus admittance matrices, reduction techniques on network matrices for network changes – case study.

UNIT II LOAD FLOW ANALYSIS 12 Hours

Importance of power flow analysis in planning and operation of power systems - statement of power flow problem - classification of buses - development of power flow model in complex variables form - iterative solution using Gauss-Seidel method - q-limit check for voltage controlled buses – power flow model in polar form - iterative solution using Newton-Raphson method.

UNIT III SYMMETRICAL COMPONENTS 12 Hours

Definition - introduction - review of symmetrical components - transformation matrices used in resolution of unbalanced voltages and currents - positive, negative and zero sequence networks of power system components - sequence networks of impedance loads, series impedance and rotating machines - representation of various types of faults in sequence networks – case study.

UNIT IV SHORT CIRCUIT ANALYSIS 12 Hours

Formulation of a mathematical model to analyses faults on power system – symmetrical faults – three phase short circuit – unloaded synchronous machine –problem of arcing faults – unsymmetrical faults – system representation – LG, LL and LLG fault – simple problems - effect of fault impedance - use of short circuit study data for relaying and breaking studies – case study of simultaneous faults on the system.

UNIT V STABILITY ANALYSIS 12 Hours

Definition and classification of power system stability – multi machine stability - single machine infinite bus (SMIB) system: development of swing equation - equal area criterion - determination of critical clearing angle and time by using modified Euler method and Runge-Kutta second order method; algorithm and flow chart.

TOTAL: 60 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:

1. Load curves
2. Unit commitments

1702EE603	MICROPROCESSOR, MICROCONTROLLER AND ITS APPLICATIONS	L	T	P	C
		3	0	0	3

PREREQUISITE:

1. Digital Electronics.
2. Linear Integrated Circuits.

COURSE OBJECTIVES:

1. To study the architecture of commonly used μ p and μ c.
2. To develop skill in assembly language program writing for 8085, 8086, and its applications.
3. To study the applications of μ p and μ c based systems.

UNIT I INTRODUCTION TO 8085 PROCESSOR 9 Hours

Hardware architecture of 8085, pin outs, functional building blocks of processor; interrupts, memory organization, I/O and memory interfacing.

UNIT II 8085 INSTRUCTION SET 9 Hours

8085 instruction set-addressing modes, instruction format, assembly language programming using basic instructions- arithmetic operations, ascending and descending order, Fibonacci series etc..

UNIT III 8051 MICROCONTROLLER ARCHITECTURE 9 Hours

8051 microcontroller- architecture, instruction format, addressing modes; assembly language programming.

UNIT IV PERIPHERAL INTERFACING DEVICES 9 Hours

8255-Programmable peripheral interfacing, 8251-serial communication, 8279-programmable keyboard/display controller, 8257-DMA controller, 8253-programmable interval timer.

UNIT V APPLICATIONS OF MICROCONTROLLER 9 Hours

Washing machine controller; stepper motor control; D/A & A/D interfacing with 8051.

TOTAL: 45 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:

1. A case study on applications of microcontrollers in automotive field.
2. Arduino/ARM processor based applications

1702EE651

**POWER ELECTRONICS AND DRIVES
LABORATORY**

L T P C
0 0 4 2

PREREQUISITE:

1. Power Electronics
2. Electrical Machinery – I & II

COURSE OBJECTIVES:

1. To determine the characteristics of power electronic devices.
2. To design a power converter for electrical drives.
3. To analyze the performance of power converter fed drives.

LIST OF EXPERIMENTS:

1. Gate Pulse Generation using R, RC and UJT.
2. Characteristics of SCR and Triac
3. Characteristics of MOSFET and IGBT
4. AC to DC half controlled converter fed DC Motor
5. AC to DC fully controlled Converter fed DC Motor
6. Step down and step up MOSFET based choppers
7. IGBT based single phase PWM inverter
8. IGBT based three phase PWM inverter fed three phase AC Motor
9. AC voltage controller
10. Switched mode power converter
11. Simulation of PE circuits (1 Φ & 3 Φ semiconverter, 1 Φ & 3 Φ full converter, DC-DC converters)

ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :

1. Simulation of closed loop speed control of DC motor drive
2. Simulation of closed loop speed control of AC motor drive

REFERENCES:

1. K. Nandakumar, R. Anandaraj, "power electronics and drives laboratory Manual", 2018

1702EE652

**MICROPROCESSOR, MICROCONTROLLER AND ITS
APPLICATIONS LABORATORY**

L	T	P	C
0	0	2	1

PREREQUISITE:

1. Analog and Digital Integrated Circuits Laboratory
2. Microprocessor, Microcontroller And Its Applications

COURSE OBJECTIVES:

1. To provide training on programming of microprocessors and microcontrollers and understand the interface requirements.
2. To provide training on programming of microcontrollers.
3. To understand the requirements of interfacing.

LIST OF EXPERIMENTS:

1. Simple arithmetic operations using 8085: addition / subtraction / multiplication /division.
2. Programming with control instructions: Ascending / descending order, maximum / minimum of numbers.
3. Programming with control instructions: Hex / ASCII / BCD code conversions.
4. Interface experiments with 8085: A/D interfacing & D/A interfacing.
5. Interfacing of Serial communication using 8085.
6. Interfacing of Keyboard and display interface using 8085.
7. Simple arithmetic operations using 8051: addition / subtraction / multiplication /division.
8. Programming of I/O port with 8051.
9. Study of stepper motor using 8085.
10. Study of dc motor using 8085.

TOTAL: 30 HOURS

ADDITIONAL EXPERIMENTS / INNOVATIVE EXPERIMENTS :

1. Programming of Traffic light controller using 8085.
2. Programming of 8259 using 8085.

REFERENCES:

1. S.Latha, "Microprocessor and microcontroller laboratory Manual", 2018.
2. Microprocessor 8085 lab manual by G.T .Swamy, Laxmi publication, first edition, 2006.

1704EE653

MINI PROJECT II

L	T	P	C
0	0	2	1

GUIDELINE FOR REVIEW AND EVALUATION

The students may be grouped into 2 to 4 and work under a project supervisor. The device / system / component(s) to be designed and developed using modeling software, may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the soft copy of the model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report examined by the internal examiner constituted by the Head of the Department.

Total: 30 Hours

1704EE654

INDUSTRIAL VISIT PRESENTATION

L	T	P	C
0	0	2	1

In order to provide the experiential learning to the students, shall take efforts to arrange at least two industrial visit / field visits in a year. A presentation based on Industrial visits shall be made in this semester and suitable credit may be awarded.

1704GE651

LIFE SKILLS: APTITUDE II

L	T	P	C
0	0	2	1

COURSE OBJECTIVES:

1. To brush up problem solving skill and to improve intellectual skill of the students.
2. To be able to critically evaluate various real life situations by resorting to Analysis of key issues and factors.
3. To be able to demonstrate various principles involved in solving mathematical problems and thereby reducing the time taken for performing job functions.
4. To enhance analytical ability of students.
5. To augment logical and critical thinking of Students.

UNIT I PARTNERSHIP, MIXTURES AND ALLEGATIONS, PROBLEM ON AGES, SIMPLE INTEREST, COMPOUND INTEREST 6 Hours

Introduction Partnership - Relation between capitals, Period of investments and Shares- Problems on mixtures - Allegation rule - Problems on Allegation – Problems on ages - Definitions Simple Interest - Problems on interest and amount - Problems when rate of interest and time period are numerically equal - Definition and formula for amount in compound interest - Difference between simple interest and compound interest for 2 years on the same principle and time period.

UNIT II BLOOD RELATIONS, , CLOCKS, CALENDARS 6 Hours

Defining the various relations among the members of a family - Solving Blood Relation puzzles - Solving the problems on Blood Relations using symbols and notations - Finding the angle when the time is given - Finding the time when the angle is known - Relation between Angle, Minutes and Hours - Exceptional cases in clocks - Definition of a Leap Year - Finding the number of Odd days - Framing the year code for centuries - Finding the day of any random calendar date .

UNIT III TIME AND DISTANCE, TIME AND WORK 6 Hours

Relation between speed, distance and time - Converting kmph into m/s and vice versa - Problems on average speed - Problems on relative speed - Problems on trains - Problems on boats and streams - Problems on circular tracks - Problems on races - Problems on Unitary method - Relation between Men, Days, Hours and Work - Problems on Man-Day-Hours method - Problems on alternate days - Problems on Pipes and Cisterns.

UNIT IV DATA INTERPRETATION AND DATA SUFFICIENCY 6 Hours

Problems on tabular form - Problems on Line Graphs - Problems on Bar Graphs - Problems on Pie Charts - Different models in Data Sufficiency - Problems on data redundancy

UNIT V ANALYTICAL AND CRITICAL REASONING 6 Hours

Problems on Linear arrangement - Problems on Circular arrangement - Problems on Double line-up - Problems on Selections - Problems on Comparisons - Finding the Implications for compound statements - Finding the Negations for compound statements- Problems on assumption - Problems on conclusions - Problems on inferences - Problems on strengthening and weakening of arguments .

TOTAL: 30 HOURS

1703EE006	DIGITAL SIGNAL PROCESSING	L	T	P	C
		3	0	0	3

PREREQUISITE:

Electric circuit theory
Linear algebra

COURSE OBJECTIVES:

- 1.To classify signals and systems & their mathematical representation.
- 2.To learn discrete Fourier transform, properties and its computation.
- 3.To know the characteristics of IIR filter and to learn the design of IIR filters for filtering undesired signals.
- 4.To know the characteristics of FIR filter and to learn the design of FIR filter for filtering undesired signals.
- 5.To study about a programmable Digital signal processor.

UNIT I SIGNALS AND SYSTEMS 9 Hours

Basic elements of DSP – concepts of frequency in Analog and Digital Signals – sampling theorem – Discrete – time signals, systems – Analysis of discrete time LTI systems – Z transform – Convolution– Correlation.

UNIT II DISCRETE FOURIER TRANSFORM 9 Hours

Introduction to DFT – Properties of DFT – Filtering methods based on DFT – FFT Algorithms – Decimation in time Algorithms, Decimation in frequency Algorithms – Use of FFT in Linear Filtering.

UNIT III IIR FILTER DESIGN 9 Hours

Structures of IIR – Analog filter design – Discrete time IIR filter from analog filter – IIR filter design by Impulse Invariance, Bilinear transformation, Approximation of derivatives – (LPF, HPF, BPF, BRF) filter design using frequency translation.

UNIT IV FIR FILTER DESIGN 9 Hours

Structures of FIR – Linear phase FIR filter – Fourier Series - Filter design using windowing techniques (Rectangular Window, Hamming Window, Hanning Window), Frequency sampling techniques – Finite word length effects in digital Filters: Errors, Limit Cycle, Noise Power Spectrum.

UNIT V DIGITAL SIGNAL PROCESSORS 9 Hours

Introduction – TMS320c5X Architecture – Features – Addressing Formats – Functional modes - Introduction to Commercial DSP Processors – TMS320C64XX, TMS320 C54X.

TOTAL: 60 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:

Finite word length effects, Multirate Signal Processing, Adaptive filtering

REFERENCES:

1703EE009	POWER SYSTEM TRANSIENT	L	T	P	C
		3	0	0	3

PREREQUISITE:

1. Transmission and Distribution.
2. Power Electronics.

COURSE OBJECTIVES:

1. To study the generation of switching transients and their control.
2. To study the mechanism of lightning strokes and travelling waves.
3. To compute the transients in travelling waves & integrated power system.

UNIT I INTRODUCTION AND SURVEY OF TRANSIENTS 9 Hours

Review and importance of the study of transients, causes for transients; RL circuit transient with sine wave excitation; double frequency transients; different types of power system transients - effect of transients on power systems, role of the study of transients in system planning.

UNIT II SWITCHING TRANSIENTS 9 Hours

Over voltages due to switching transients - resistance switching, load switching, normal and abnormal switching transients; current suppression, current chopping; capacitance switching-capacitance switching with a restrike, with multiple restrikes. Illustration for multiple restriking transients; ferro resonance.

UNIT III LIGHTNING TRANSIENTS 9 Hours

Review of the theories in the formation of clouds and charge formation; rate of charging of thunder clouds; mechanism of lightning discharges and characteristics of lightning strokes; model for lightning stroke; factors contributing to good line design - protection from lightning.

UNIT IV TRAVELING WAVES ON TRANSMISSION LINE 9 Hours

Computation of transients; transient response of systems with series and shunt lumped parameters and distributed lines; traveling wave concept - step response, Bewley's lattice diagram; standing waves and natural frequencies; reflection and refraction of travelling waves.

UNIT V TRANSIENTS IN INTEGRATED POWER SYSTEM 9 Hours

The short line and kilometric fault; distribution of voltages in a power system; line dropping and load rejection; voltage transients on closing and reclosing lines; over voltage induced by faults; switching surges on integrated system; qualitative application of EMTP for transient computation.

TOTAL: 60 HOURS

FURTHER READING / CONTENT BEYOND SYLLABUS / SEMINAR:

1. Analysis Power System Transient Using Wavelet Transform.
2. Case Study about the Effect of transients developed in Home appliances.

REFERENCES:
