2302BS401	OPERATING SYSTEMS				L	T	P	C																																																																														
					3	0	2	3																																																																														
PRE-REQUISITE:																																																																																						
	Data structures like stack, queue, linked list, tree, graph, hashing, file structures, any structured programming language (like C or python).																																																																																					
COURSE OBJECTIVES:																																																																																						
	1.To know the concept of Operating Systems and types of operating system																																																																																					
	2.To analyze the process management system with scheduling algorithms																																																																																					
	3. To process the communication between the processes and detect and recover the deadlocks.																																																																																					
	4. To manage the memory system to utilize the memory space.																																																																																					
	5. To manage the file and disk system to utilize the storage space.																																																																																					
COURSE OUTCOMES:																																																																																						
On the successful completion of the course, students will be able to																																																																																						
CO1:	Infer the knowledge on evolution of operating systems from primitive batch systems to sophisticated multi-user systems and implement the usage of different system calls to manage the resources.																																																																																					
CO2:	Analyze the mechanism of threads with the process of scheduling algorithms used in a multi-programming environment.																																																																																					
CO3:	Outline the mechanism of inter process communication using shared memory, message passing and analyze the activities of process synchronization, deadlock to increase the system performance.																																																																																					
CO4:	Design the hardware component to implement the virtual memory environment with the base knowledge of memory management methodologies																																																																																					
CO5:	Prefer a most suitable file system and the ordered perspective module of disk management methods for computing and storage scenario.																																																																																					
COs Vs POs MAPPING:

COURSE CONTENTS:																																																																																						
MODULE I	INTRODUCTION							9 Hours																																																																														

Concept of Operating Systems (OS), Generations of OS, Types of OS, OS Services, Interrupt handling and System Calls, Basic architectural concepts of an OS, Concept of Virtual Machine, Resource Manager view, process view and hierarchical view of an OS.

MODULE II | PROCESS MANAGEMENT SYSTEM | 9 Hours

Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching, Threads: Definition, Various states, Benefits of threads, Types of threads, Concept of multi-threads, Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time, Scheduling algorithms: Pre-emptive and non-pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

MODULE III | IPC AND DEADLOCKS | 9 Hours

Concurrent processes, precedence graphs, Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Semaphores, Strict Alternation, Peterson's Solution, The Producer/ Consumer Problem, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem, Barber's shop problem, Deadlocks: Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock detection and Recovery, Concurrent Programming: Critical region, conditional critical region, monitors, concurrent languages, communicating sequential process (CSP); Deadlocks - prevention, avoidance, detection and recovery.

MODULE IV | MEMORY MANAGEMENT SYSTEM | 9 Hours

Memory Management: Basic concept, Logical and Physical address maps, Memory allocation: Contiguous Memory allocation – Fixed and variable partition – Internal and External fragmentation and Compaction, Virtual Memory: Basics of Virtual Memory – Hardware and control structures – Locality of reference, Page allocation, Partitioning, Paging, Page fault, Working Set, Segmentation, Demand paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU), I/O Hardware: I/O devices, Device controllers, Direct Memory Access, Principles of I/O.

MODULE V | ARCHITECTURE DEPENDENT CODE IMPROVEMENT | 9 Hours

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free-space management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency and performance, Disk Management: Disk structure, Disk scheduling- FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks.

TOTAL: 45 HOURS

LIST OF EXPERIMENTS:

1. Analysis and Synthesis of Basic Linux Commands
2. Programs using Shell Programming
3. Implementation of Unix System Calls
4. Simulation and Analysis of Non-pre-emptive and Pre-emptive CPU Scheduling Algorithms
5. Simulation of Producer – Consumer Problem using Semaphores and Implementation of Dining Philosopher's Problem to demonstrate Process Synchronization
6. Simulation of Banker's Algorithm for Deadlock Avoidance
7. Analysis and Simulation of Memory Allocation and Management Techniques
8. Implementation of Page Replacement Techniques
9. Simulation of Disk Scheduling Algorithms
10. Implementation of File organization Techniques.

TOTAL: 30 HOURS

2302BS402	DESIGNANDANALYSISOFALGORITHMS	L	T	P	C
		3	0	0	3

PREREQUISITE:

	DataStructuresandAlgorithms
--	-----------------------------

COURSEOBJECTIVES:

	1. To understand the techniques for analyzing the computer algorithms.
	2. To learn the paradigms for designing the algorithms.
	3. To analyze the efficiency of various algorithm design techniques/paradigms for the same problem.
	4. To understand the limitations of algorithmic power.

COURSE OUTCOMES:

On the successful completion of the course, students will be able to

CO1:	Infer the knowledge on evolution of operating systems from primitive batch systems to sophisticated multi-user systems and implement the usage of different system calls to manage the resources.
CO2:	Analyze the mechanism of threads with the process of scheduling algorithms used in a multi-programming environment.
CO3:	Outline the mechanism of inter process communication using shared memory, message passing and analyze the activities of process synchronization, deadlock to increase the system performance.
CO4:	Design the hardware component to implement the virtual memory environment with the base knowledge of memory management methodologies
CO5:	Prefer a most suitable file system and the ordered perspective module of disk management methods for computing and storage scenario.

COs Vs POs MAPPING:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	-	-	-	-	-	1	1	3	-

CO3	3	3	3	-	-	-	-	-	3	3	3	-
CO4	2	2	1	-	-	-	-	-	3	1	3	-
CO5	1	1	2	-	-	-	-	-	-	-	3	-

COs Vs PSOs MAPPING:

COs	PSO1	PSO2	PSO3
CO1	3	2	-
CO2	3	2	-
CO3	2	2	-
CO4	1	2	-
CO5	1	2	-

COURSE CONTENTS:

ModuleI	Introduction to Algorithms and Analysis	9Hours
Characteristics of Algorithm. Analysis of Algorithm: Asymptotic analysis of Complexity Bounds – Best, Average and Worst-Case behavior; Performance Measurements of Algorithm, Time and Space Trade-Offs, Analysis of Recursive Algorithms through Recurrence Relations: Substitution Method, Recursion Tree Method and Masters' Theorem.		
ModuleII	ALGORITHMIC STRATEGIES	9Hours
Fundamental Algorithmic Strategies: Brute-Force – Exhaustive Search - Assignment Problem- Knapsack problem - Dynamic Programming – Optimal Binary Search Tree and Travelling Salesman Problem.		
ModuleIII	GRAPH AND TREE ALGORITHMS	9Hours
Greedy methodologies - Traversal algorithms: Depth First Search (DFS) and Breadth First Search (BFS) - Shortest path algorithms - Transitive closure - Minimum Spanning Tree - Topological sorting - Network Flow Algorithm.		
ModuleIV	BACKTRACKING & BRANCH AND BOUND TECHNIQUES	9Hours
Backtracking – n-Queens problem – Graph Coloring Problem - Hamiltonian Circuit Problem – Subset Sum Problem - Branch and Bound - Assignment problem – Knapsack Problem – Traveling Salesman Problem		
ModuleV	FEATURED ALGORITHMS	9Hours
Approximation algorithms, Randomized algorithms, Class of problems beyond NP – PSPACE, Introduction to Quantum Algorithms.		
TOTAL: 45 HOURS		
Mode of Assessment: CAT/Assignment/Quiz/Seminar/Presentation/ESE		
Course Outcomes: <ol style="list-style-type: none"> 1. Apply the mathematical tools to analyze and derive the running time of the algorithms. 2. Demonstrate the major algorithm design paradigms. 3. Explain major graph algorithms, string matching and geometrical algorithms along with their analysis. 4. Articulating Randomized Algorithms. 5. Explain the hardness of real-world problems with respect to algorithmic efficiency and learning to cope with it

2302BS403	SOFTWARE ENGINEERING									L	T	P	C
										3	0	0	3
PREREQUISITE: Programming and Problem Solving, Engineering Exploration.													
COURSE OBJECTIVES:													
	1. To understand the phases in a software project												
	2. To understand fundamental concepts of requirements engineering												
	3. To Understand Analysis Modeling.												
	4. To understand the various software design methodologies.												
	5. To learn various testing and maintenance measures.												
COURSE OUTCOMES:													
On the successful completion of the course, students will be able to													
CO1:	Identify the key activities in managing a software project, project schedule, estimate project cost and effort required.												
CO2:	Compare different process models												
CO3:	Concepts of requirements engineering and Analysis Modeling.												
CO4:	Apply systematic procedure for software design and deployment.												
CO5:	Compare and contrast the various testing and maintenance.												
COs Vs POs MAPPING:													
	COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
	CO1	2	-	3	3	-	-	-	-	-	-	-	2
	CO2	2	-	3	3	-	2	-	-	-	-	-	-
	CO3	-	-	3	3	-	-	-	-	-	-	3	-
	CO4	-	2	-	-	-	-	-	-	-	2	-	-

	CO1	2											
	CO2	2	2										
	CO3	2	2										
	CO4	2	2										
	CO5	2	2										
COURSE CONTENTS:													

MODULE I	SOFTWARE PROCESS AND AGILE DEVELOPMENT	9 Hours
Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models – Introduction to Agility-Agile process-Extreme programming XP Process-Quality management-SQA-SQA plan		
MODULE II	REQUIREMENTS ANALYSIS AND SPECIFICATION	9 Hours
Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document – Requirement Engineering Process: Feasibility Studies, Requirements elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets- Data Dictionary.		
MODULE III	SOFTWARE DESIGN	9 Hours
Design process – Design Concepts-Design Model– Design Heuristic – Architectural Design - Architectural styles, Architectural Design, Architectural Mapping using Data Flow- User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components.		
MODULE IV	TESTING AND MAINTENANCE	9 Hours
Software testing fundamentals-Internal and external views of Testing-white box testing - basis path testing-control structure testing-black box testing- Regression Testing – Unit Testing – Integration Testing – Validation Testing – System Testing and Debugging –Software Implementation Techniques: Coding practices-Refactoring Maintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering.		
MODULE V	PROJECT MANAGEMENT	9 Hours
Software Project Management: Estimation – LOC, FP Based Estimation, Make/Buy Decision COCOMO I & II Model – Project Scheduling – Scheduling, Earned Value Analysis Planning – Project Plan, Planning Process, RFP Risk Management – Identification, Projection - Risk Management-Risk Identification-RMMM Plan-CASE TOOLS		
TOTAL: 45 HOURS

2302BS404	INTRODUCTION TO INNOVATION, IP MANAGEMENT & ENTREPRENEURSHIP										L	T	P	C																																																																													
											3	0	0	3																																																																													
Objectives:																																																																																											
	1. To study the fundamentals of technology innovation, intellectual property rights and entrepreneurship.																																																																																										
	2. To identify and discover market needs.																																																																																										
	3. To create, protect and assetize and commercialize intellectual property.																																																																																										
	4. To learn the opportunities and challenges for entrepreneurs.																																																																																										
	5. To learn the fundamentals of a business model based on technology innovation.																																																																																										
Course Outcomes:																																																																																											
Upon completion of the course, the students will be able to																																																																																											
CO1:	Understand the innovation life cycle and types of innovation.																																																																																										
CO2:	Gain knowledge on the importance of intellectual property rights and procedure of filing an IPR.																																																																																										
CO3:	Interpret the market needs and analyze the marketing strategy.																																																																																										
CO4:	Build a business model based on technology innovation																																																																																										
CO5:	Convert an innovative idea into a venture and protect it through intellectual property rights.																																																																																										
COs Vs POs MAPPING

COURSE CONTENTS:		
MODULE I	INNOVATION	9
A primer on Innovation, IP Rights and Entrepreneurship - Types of Innovation - incremental, disruptive, Lifecycle of Innovation - idea, literature survey, PoT, PoC, Challenges in Innovation - time, cost, data, infrastructure- Case study.		
MODULE II	INTELLECTUAL PROPERTY RIGHT	9
Types of IPR - patents, copyrights, trademarks, Geographical Indication, Lifecycle of IP -creation, protection, assetization, monetization, Balancing IP risks & rewards - Right Access and Right Use of Open Source and 3rd party products, technology transfer & licensing, IP valuation - methods, examples, limitations- Case study.		
MODULE III	ENTREPRENEURSHIP	9
Opportunity identification in technology entrepreneurship - customer pain points, competitive context, Market research, segmentation & sizing, Product positioning & pricing, go-to market strategy, Innovation assessment - examples, patentability analysis.		
MODULE IV	BUSINESS MODELS	9
Start-up business models - fund raising, market segments, channels, co-innovation and open innovation - academia, start-ups and corporates, Technology innovation – Case study.		
MODULE V	INNOVATION, INCUBATION & ENTREPRENEURSHIP IN CORPORATE CONTEXT	9
Innovation, Incubation & Entrepreneurship in Corporate Context, Technology-driven Social Innovation & Entrepreneurship, Manage innovation, IP and Entrepreneurship Programs- Processes, Governance and Tools

2302BS405	DESIGN THINKING	L	T	P	C
		3	0	2	3

PREREQUISITE:

	The course assumes no prior skill or background in design, art or engineering. It is open to all undergraduates and graduate students with an interest in learning design thinking, and is especially recommended for those students planning social-venture and other kinds of design Interventions.
--	---

COURSE OBJECTIVES:

	1. Embracing human-centered design means believing that all problems, even the seemingly intractable ones like poverty, gender equality, and clean water, are solvable.
	2. Believing that the people who face those problems every day are the ones who hold the key to their answer.
	3. Offers problem solvers of any stripe a chance to design with communities, to deeply understand the people they're looking to serve, to dream up scores of ideas, and to create innovative new solutions rooted in people's actual needs.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

CO1:	Describe Key Concepts and basics of Design Thinking Principles
CO2:	Design by better understanding people, observe their lives, hear their hopes and desires, and get smart on the design challenge.
CO3:	Generate ideas, identify opportunities for design, and test and refine solutions.
CO4:	Develop to bring the solution to life by figuring out how to get idea to market and to maximize its impact in the world.

COs Vs POs MAPPING

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	-	-	-	-	-	1	1	3	-

COs Vs PSOs MAPPING:

COs	PSO1	PSO2	PSO3
CO1	2		
CO2	2	2	
CO3	2	2	
CO4	2	2	
CO5	2	2	

COURSE CONTENTS:

Module I	Design thinking basics	09 Hours
Design thinking process, Process modules – Empathize, Define, Ideate, Prototype & Test, Interview Journey Map, Powers of Ten, Point of View, How Might We Questions, Storytelling.		Preparation,
Module II	Inspiration Phase	12 Hours

Frame Your Design Challenge, Create a Project Plan, Build a Team, Recruiting Tools, Secondary Research, Interview, Group Interview, Expert Interview, Define Your Audience, Conversation Starters, Extremes and Mainstreams, Immersion, Analogous Inspiration, Card Sort, Peers Observing Peers, Collage, Guided Tour, Draw It, Resource Flow, Case Study: Vroom

Module III	Ideation Phase	12 Hours
Download Your Learnings, Share Inspiring Stories, Top Five, Find Themes, Create Insight Statements, Explore Your Hunch, How Might We, Create Frameworks, Brainstorm, Brainstorm Rules, Bundle Ideas, Get Visual, Mash-Ups, Design Principles, Create a Concept, Co-Creation Session, Gut Check, Determine, What to Prototype, Storyboard, Role Playing, Rapid Prototyping, Business Model Canvas, Get Feedback, Integrate Feedback and Iterate, Case Study: Asili		

Module IV	Implementation Phase	12 Hours
Live Prototyping, Roadmap, Resource Assessment, Build Partnerships, Ways to Grow Framework, Staff, Your Project, Funding Strategy, Pilot, Define Success, Keep Iterating, Create a Pitch, Sustainable Revenue, Monitor and Evaluate, Keep Getting Feedback, Case Study: Clean Team		

TOTAL: 45 HOURS

LIST OF EXPERIMENTS [SUGGESTED]

1. Frame a Design Challenge
2. Plan Research
3. Build an Interview Guide
4. Conduct Research
5. Point of View Statements
6. Cluster into Themes
7. Create Insight Statements
8. Brainstorm
9. Select Best Ideas
10. Describe the Ideas
11. Create a Storyboard
12. Determine What to Prototype
13. Test Prototype & Get Feedback
14. Business Model Canvas
15. Create an Action Plan
16. Resource Assessment
17. Create a Pitch
18. Reflect

	2. To develop formulation skills in transportation models and finding solutions																																																																																								
	3. To know how project management techniques help in planning and scheduling a project																																																																																								
	4. To understand queue discipline in different situations and simulation techniques.																																																																																								
COURSEOUTCOMES:																																																																																									
Onthesuccessful completionofthecourse,students willbeableto																																																																																									
CO1:	Solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained.																																																																																								
CO2:	Interpret the transportation and assignment models' and infer solutions to the real-world problems																																																																																								
CO3:	Use CPM and PERT techniques to plan, schedule and control project activities.																																																																																								
CO4:	Derive the mathematical models of Markovian queues and compute various measures of performance in these models.																																																																																								
CO5:	Explain procedures, effectively communicate ideas, interpret results and solutions in simulation.

COURSE CONTENTS:		
MODULE I	INTRODUCTION TO LINEAR PROGRAMMING	9 Hours
Introduction to applications of operations research in functional areas of management. Linear Programming-formulation, solution by graphical and simplex methods (Primal - Penalty, Two Phase).		
MODULE II	TRANSPORTATION AND ASSIGNMENT PROBLEMS	9 Hours
TP - Examples, Definitions – decision variables, supply & demand constraints, formulation, Balanced & unbalanced situations, Solution methods – NWCR, minimum cost and VAM, test for optimality (MODI method), degeneracy and its resolution. AP-Examples, Definitions–decision variables, constraints formulation, Balanced & unbalanced situations, Solution method–Hungarian, test for optimality (MODI method), degeneracy and its resolution.		
MODULE III	NETWORK MODELS	9 Hours
Project definition, Project scheduling techniques – Gantt chart, PERT & CPM, Determination of critical paths-Estimation of Project time and its variance in PERT using statistical principles.		
MODULE IV	QUEUING THEORY	9 Hours
Definitions– queue (waiting line), waiting costs, characteristics (arrival, queue, service discipline) of queuing system, queue types (channel vs. phase). Kendall’s notation, Little’s law, steady state behaviour, Poisson Process & queue, Models with examples - M/M/1 and its performance measures; M/M/m and its performance measures.		
MODULE V	SIMULATION METHODOLOGY	9 Hours
Definition and steps of simulation, random number, random number generator, Monte-Carlo Simulation -Application in Scheduling and Queuing systems.		
TOTAL: 45HOURS

										3	0	0	3																																																																														
COURSE OBJECTIVES:																																																																																											
1.	The objective of the course is to make a student to create and commercialize the product																																																																																										
COURSE OUTCOMES:																																																																																											
Upon successful completion of the course, students will be able to																																																																																											
CO1:	Understand developing business models and growth drivers																																																																																										
CO2:	Use the business model canvas to map out key components of enterprise																																																																																										
CO3:	Analyse market size, cost structure, revenue streams, and value chain																																																																																										
CO4:	Understand build-measure-learn principles																																																																																										
CO5:	Foreseeing and quantifying business and financial risks

COURSE CONTENTS:						
Module-I	CREATIVITY AND DESIGN THINKING					9 Hours
Identify the vertical for business opportunity, understand your customers, accurately assess market opportunity						
Module-II	MINIMUM VIABLE PRODUCT					9 Hours
Value Proposition, Customer Segments, Build-measure-learn process						
Module-III	BUSINESS MODEL DEVELOPMENT					9 Hours
Channels and Partners, Revenue Model and streams, Key Resources, Activities and Costs, Customer Relationships and Customer Development Processes, Business model canvas –the lean model-templates						
Module-IV	BUSINESS PLAN AND ACCESS TO FUNDING					9 Hours
Visioning your venture, taking the product/ service to market, Market plan including Digital & Viral Marketing, start-up finance - Costs/Profits & Losses/cash flow, Angel/VC./Bank Loans and Key elements of raising money						
Module-V	LEGAL & CONTEMPORARY DISCUSSIONS					9 Hours
Legal, Regulatory, CSR, Standards, Taxes & Contemporary discussion						
TOTAL: 45 HOURS						
TEXTBOOKS:						
1. Steve Blank, K & S Ranch (2012)The Startup Owner's Manual: The Step-By-Step Guide for Building a Great Company, 1st edition						
2. Steve Blank (2013)The Four Steps to the Epiphany, K&S Ranch; 2nd edition						
3. Eric Ries (2011) The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses, Crown Business

4. Lean Analytics: Use Data to Build a Better Startup Faster(Lean Series), Alistair Croll& Benjamin Yoskovitz,O'Reilly Media; 1stEdition						
5. Marty Cagan, (2008) Inspired: How To Create Products Customers Love, SVPG Press; 1stedition						

2302BS451	SOFTWARE ENGINEERING LABORATORY										L	T	P	C
											0	0	2	2
PREREQUISITE: Programming and Problem Solving, Engineering Exploration.														
	-													
COURSE OBJECTIVES:														
	1. To understand the concepts of software engineering													
	2. To understand the effectiveness of software project management													
	3. To understand the metrics and models of software quality and reliability													
	4. To implement software requirement analysis, design and construction													
	5. To know the various software testing methods													
COURSE OUTCOMES:														
On the successful completion of the course, students will be able to														
CO1:	To utilize engineering approach to software development													
CO2:	To practice various software life cycle models.													
CO3:	To implement software quality models.													
CO4:	To analyze the techniques of requirements gathering and modeling													
CO5:	To implement class responsibility collaborator model.													
COs Vs POs MAPPING:														
COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	2	2	-	-	-	-	1	-	3	2	1	-
CO2	2	3	1	1	-	1	-	-	-	-	-	-	-	-
CO3	2	2	2	1	2	-	-	-	-	-	-	-	1	1
CO4	-	3	2	1	2	-	-	-	2	1	-	1	2	1
CO5	2	3	-	1	-	1	-	-	-	-	-	-	2	-
COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
COs Vs PSOs MAPPING:														

COs	PSO1	PSO2
CO1		2
CO2	2	2
CO3	2	2
CO4	2	2
CO5	2	2

LIST OF EXPERIMENTS:

1. Development of requirements specification.
2. Function oriented design using SA/SD
3. Object – oriented design using UML
4. Test Case design
5. Implementation of the designed software using C++ language
6. Perform testing using any tool or different strategies
7. Use of Case Tools and other tools such as configuration management tools
8. Program analysis tools in the software life cycle

TOTAL: 45 HOURS
